See the email below and the attached lab result. Another residential well has vinyl chloride impacts at 54 ppb, which is much higher than the other wells with VC. I have a phone message into Brian Schlieger to make sure this well gets a system installed promptly given the high levels of VC.

Hello Brian,

We have the chemical results available for 4012 Cossell Rd, see attached. 4012 Cossell Rd is NE of 4018 and 4042 W Vermont. Vinyl Chloride level is 54 ppb, which is not to surprising to me when considering the predominant GW flow for this area. We will of course continue to obtain additional GW samples from 4012 Cossell Rd. 4018 W Vermont and 4042 W Vermont were both sampled yesterday (11/30) from outside spigots, should have results back next week.
